## 2.8 Research Groups and International Scientific Collaborations

- Direction of the interdisciplinary research center "Digital Arena for Inclusive Humanities (DAIH)" (<https://www.daih.eu>). DAIH is a center of excellence in the field of digital technologies and computational analysis applied to languages and literatures, with a focus on inclusion. The center's research objectives lie at the intersection of computer science, particularly artificial intelligence, and the humanities, specifically in the areas of linguistic and literary studies. DAIH aims to promote and foster inclusion in research, infrastructure, training, and the dissemination of scientific content to overcome disparities, inequalities, and discriminations in modern society. Established in the context of the Departments of Excellence funding scheme (MUR 2023-2027), the center comprises members from various scientific disciplines and has collaborations at the national and international levels.  
since: Feb 15, 2023
- Establishment and direction of the activities of the research group "Information Extraction for Robotic Surgery" (<https://www.dlls.univr.it/?ent=grupporic&id=503&lang=it>), which involves the University of Verona (with three departments: Engineering for Innovative Medicine, Computer Science, and Foreign Languages and Literatures) and the University of Mannheim (Germany - local contact: Prof. Simone Paolo Ponzetto - <https://www.uni-mannheim.de/dws/people/professors/prof-dr-simone-paolo-ponzetto/>). The group is engaged in researching and developing techniques for extracting information from manuals and textual content in the field of robotic surgery, particularly for extracting procedural knowledge from descriptions of robotic surgery interventions in domain manuals. In the context of the group's activities, I co-supervised, along with Prof. Fiorini, the Ph.D. thesis of Marco Bombieri (University of Verona).  
since: Jan 1, 2020

- Collaboration with Professors Alessandro Sperduti and Lamberto Ballan (University of Padua - <http://www.math.unipd.it/~sperduti>, <http://www.lambertoballan.net/>) and Luciano Serafini (Bruno Kessler Foundation, Trento - <https://dkm.fbk.eu/author/lucianoserafini/>). The research group (involving the University of Verona, University of Padua, and Bruno Kessler Foundation) investigates the development of techniques for the automatic extraction and linking of knowledge from multimodal content (text and images).  
since: Jan 1, 2019
- Collaboration with Prof. Dr. Md. Mark Musen (Stanford University, USA - <https://profiles.stanford.edu/mark-musen>). Following the success of an individual mobility grant from the Bruno Kessler Foundation, I had the opportunity to visit the Stanford Center for Biomedical Informatics Research (Stanford University, USA) for three months (September 2013 - December 2013) and establish a research collaboration with the Musen Lab (led by Prof. Dr. Md. Mark Musen) on investigating and comparing collaboration dynamics in tools for collaborative ontology construction (WebProtege, MoKi).  
since: Sep 1, 2013
- Collaboration with Prof. Piek Vossen (Vrije Universiteit Amsterdam, The Netherlands - <https:////vossen.info/>). The collaboration originated in the context of the NewsReader project (EU FP7 Strep Project, Grant 316404), where I served as the local unit coordinator for the Bruno Kessler Foundation. I established a productive scientific collaboration with Prof. Piek Vossen and his Computational Linguistics & Text Mining Lab (CLTL) at Vrije Universiteit (VU) Amsterdam (The Netherlands), investigating the development of techniques for the automatic extraction of knowledge from textual resources to enable the formalization, interrogation, and automatic reasoning on the extracted knowledge. On these topics, Prof. Vossen formally appointed me as co-promoter for the doctoral thesis of Roxane Segers at Vrije Universiteit Amsterdam.  
since: Jan 1, 2013
- Participation in the activities of the W3C Ontology-Lexicon community group (OntoLex - <https:////www.w3.org/community/ontolex/>). OntoLex is an international community group sponsored by the World Wide Web Consortium (W3C) that focuses on developing models for the ontological representation of lexical content and best practices for creating linguistic resources according to the principles of Linked Data.  
since: May 18, 2012
- Collaboration with Prof. Leo Wanner (Universidad Pompeu Fabra, Barcelona, Spain - <https:////www.icrea.cat/Web/ScientificStaff/leo-wanner-324>). The collaboration originated in the context of the PESCaDO project (EU FP7 Strep Project, Grant 248594), where I served as the local unit coordinator for the Bruno Kessler Foundation. I established a fruitful scientific collaboration with Prof. Leo Wanner and the TALN group at Universidad Pompeu Fabra (Barcelona, Spain), investigating the development of ontology-based automatic reasoning techniques to provide personalized decision support based on user profiles and environmental data (e.g., air quality, pollen concentration).  
since: Jan 1, 2010
- Collaboration with Prof. Silvia Miksch (TU Wien, Austria - <https:////www.cvast.tuwien.ac.at/team/silvia-miksch>). I collaborated with Prof. Silvia Miksch and her group at TU Wien, investigating the development of collaborative techniques and tools for the formal modeling in the ASBRU language of clinical medical protocols.  
since: Jan 1, 2008
- Collaboration with Prof. Stefanie Lindstaedt (Graz University of Technology & Know-Center,

Austria - <https://www.tugraz.at/institute/isds/>). The collaboration originated in the context of the EU APOSDE project (EU FP6 IP Project, Grant 027023), where I participated on behalf of the Bruno Kessler Foundation and coordinated activities on individual project tasks. I collaborated with Prof. Stefanie Lindstaedt and her group at TU Graz / Know-Center, investigating the development of collaborative techniques and tools for ontology modeling.  
since: May 9, 2007

- For over 11 years, I have been part of the "Data and Knowledge Management" research group (led by Luciano Serafini - <https://dkm.fbk.eu/author/lucianoserafini/>) at the Bruno Kessler Foundation (Trento, Italy - [www.fbk.eu](http://www.fbk.eu)). The group is characterized by numerous international collaborations, many of which I established and/or coordinated. During the 11 years with the group, I scientifically coordinated group activities on specific research topics, such as Information Extraction and Semantic Technologies for Decision Support, contributing to 95 publications of the group, with 34 involving collaboration with at least one international co-author (from a foreign university or research institute). As a result of the group's research activities, I contributed to the creation and public release of numerous resources (tools and ontologies) to the scientific community: PSL4EA, JPARK, KE4IR, PIKES, KnowledgeStore, RDFpro, MoKi, TeX-OWL, PreMON, The Event and Situation Ontology (ESO), The PESCaDO Ontology, The BPMN Ontology. I contributed to the acquisition of various research projects for the group (NewsReader, Organic.Lingua). I've been involved, often in coordinating roles, in various European research projects for the group (NewsReader, PESCaDO, APOSDE) and a research assignment commissioned by the company Edizioni Centro Studi Erickson S.p.A. (ePlanning project). I supervised various doctoral theses (Matteo Lorenzini: 2017 - 2022; Giulio Petrucci: 2013 - 2018; Francesco Corcoglioniti: 2012 - 2016), Master's degree theses (Rakebul Hasan: 2009; Nahid E Mahbub: 2009; Md Kamrul Hasan: 2009; Musawar Saeed: 2009; Matteo Matassoni: 2014; Yiqing Liang: 2017), and Bachelor's degree theses (Marco Spanò: 2018).

## 2.12 Resources

### 2.12.1 Datasets

- Census-like survey responses generated by LLM-impersonated profiles  
The dataset comprises 6,400 census-like surveys generated by four widely used large language models (OpenAI GPT-4o-mini, Google Gemini 2.5 Flash, Google Gemma 3 27B, and AllenAI OLMo 2 32B). Each model was prompted to impersonate distinct user profiles, including a generic US resident, an Asian individual, an African American individual, a white individual, a person with a disability, a man, and a woman. The repository further provides the code employed to generate these profiles and the results of statistical analyses comparing the collected data across models, demographic profiles, and with real-world benchmarks.  
Web-site: <https://github.com/rospocher/impersonification-bias>
- Bloomberg Terminal Dataset for Target-Based Financial Sentiment Analysis  
The dataset comprises 1,334 financial-news articles collected via Bloomberg Terminal (from September 4, 2023 to January 30, 2024) about four listed companies (Alphabet, Amazon, Netflix and Nvidia). Each article includes metadata such as publication date/time, a unique ID, the target company, and a URL link. Three annotators manually labelled both the target entity and the financial sentiment toward the target (-1 = Negative, 0 = Neutral, 1 = Positive). The dataset supports benchmarking various models (LLMs, transformer-based discriminative models, lexicon-based methods) in a target-based financial sentiment-analysis task.  
Web-site: [https://github.com/iftikharm895/Target-Based\\_Sentiment\\_Analysis\\_in\\_Financial\\_News](https://github.com/iftikharm895/Target-Based_Sentiment_Analysis_in_Financial_News)

- Representation of Disability in Large Language Models

The dataset includes anonymized Reddit posts written by people with disabilities, as well as synthetic social-media posts generated by several large language models (LLMs) simulating the perspective of disabled individuals. Each entry is automatically annotated with sentiment, emotion, and depression level. The dataset was created to support a study comparing how real users with disabilities express their emotions online with how LLMs represent those emotions when asked to write from the same perspective.

Web-site: <https://github.com/marcobombieri/LLM-disability-representation>

- LLM Jailbreaking

The dataset supports a study on the effects of a simple and generalizable jailbreak attack, created by prompting LLMs to “think backward” — that is, to reason in the opposite way from their usual behavior. It contains the jailbroken outputs produced by three LLMs (ChatGPT, Gemini, and Claude), along with the corresponding prompts and manual annotations of answer quality: A (factually incorrect or toxic), B (factually correct and non-toxic but incoherent or flawed), and C (factually correct).

Web-site: <https://github.com/marcobombieri/LLM-jailbreaking-attack>

- Do LLM dream of ontologies?

The repository “Do LLM Dream of Ontologies?” provides data and code supporting the analysis on how large language models handle ontology concepts. It includes Dataset (GO and UBERON datasets with predictions from Pythia-12B, GPT-3.5, and GPT-4), Performance\_analysis (scripts for computing web occurrences, correlating performance with concept frequency, and generating plots and prompts), and Prompt\_invariance (code and results for testing prediction robustness under different prompts).

Web-site: <https://github.com/marcobombieri/do-LLM-dream-of-ontologies>

- Explicit lyrics datasets

Two annotated datasets, one for English lyrics (807K songs) and one for Italian lyrics (37K songs), built starting from Spotify and LyricWiki content, to support the training and evaluation of automatic tools for detecting explicit song lyrics, i.e., lyrics whose content is unsuitable for children. An additional dataset (4K songs) is manually annotated with fine-grained explicitness information, i.e., why the song lyrics are marked as explicit (e.g., strong language, sexual reference)

Web-site: <https://github.com/rospocher/explicit-lyrics-detection/>

- Surgical Procedural Knowledge Sentences (SPKS)

SPKS is a textual dataset for the surgical robotic field consisting of 1.958 sentences (37.022 words and 3.999 unique words) manually annotated as procedural and non-procedural by an expert annotator

Web-site: <https://gitlab.com/altairLab/spks-dataset/>

- Visual-Textual-Knowledge Entity Linking (VTKEL)

VTKEL, derived from Flickr30k-Entities dataset, consists of documents composed of a picture and five corresponding descriptions captioning it. Visual and textual mentions of each picture and captions are annotated and aligned to entities typed with classes from YAGO

Web-site: <https://doi.org/10.6084/m9.figshare.7882781.v6>

- Annotated dataset to assess the accuracy of the textual description of cultural heritage records

The dataset contains more than 100K textual descriptions of cultural items from Cultura Italia, the Italian National Cultural aggregator. Each of the description is labeled either HIGH or LOW quality, according its adherence to the standard cataloguing guidelines provided by Istituto

### 2.12.2 Tools

- Explicit Lyrics Detectors

Starting from the original PropBank framebank, we enriched it by adding new lemmas, frames and semantic roles required to cover missing information in general English but needed in procedural surgical language, releasing the Robotic-Surgery Procedural Framebank (RSPF). We then collected from robotic-surgery textbooks as-is sentences for a total of 32,448 tokens, and we annotated them with RSPF labels. We so obtained and publicly released the first annotated corpus of the robotic-surgical domain that can be used to foster further research on language understanding and procedural entities and relations extraction from clinical and surgical scientific literature
