2.7.3 Language Models

- SurgicBERTa
  A pre-trained language model specific for the English surgical language, i.e., the language used in the surgical domain. SurgicBERTa has been obtained from RoBERTa through continued pre-training with the Masked-Language-Modeling objective on 300k sentences taken from English surgical books and papers, for a total of 7 million words. To the best of our knowledge, SurgicBERTa is the first pre-trained language model made available for the surgical domain
  Web-site: https://huggingface.co/marcobombieri/surgicberta/

2.7.4 Linguistic Resources

- Robotic Surgery Propositional Bank (RSPB)
  The Robotic-Surgery Propositional Bank is the first robotic-surgery procedural corpus, annotated with PropBank-style semantic labels. Starting from the original PropBank framebank, we enriched it by adding new lemmas, frames and semantic roles required to cover missing information in general English but needed in procedural surgical language, releasing the Robotic-Surgery

Procedural Framebank (RSPF). We then collected from robotic-surgery textbooks as-is sentences for a total of 32,448 tokens, and we annotated them with RSPF labels. We so obtained and publicly released the first annotated corpus of the robotic-surgical domain that can be used to foster further research on language understanding and procedural entities and relations extraction from clinical and surgical scientific literature
Web-site: https://gitlab.com/altairLab/robotic-surgery-propositional-bank/

2.7.5 Datasets

- Explicit lyrics datasets
  Two annotated datasets, one for English lyrics (807K songs) and one for Italian lyrics (37K songs), built starting from Spotify and LyricWiki content, to support the training and evaluation of automatic tools for detecting explicit song lyrics, i.e., lyrics whose content is unsuitable for children. An additional dataset (4K songs) is manually annotated with fine-grained explicitness information, i.e., why the song lyrics are marked as explicit (e.g., strong language, sexual reference)
  Web-site: https://github.com/rospocher/explicit-lyrics-detection/

- Surgical Procedural Knowledge Sentences (SPKS)
  SPKS is a textual dataset for the surgical robotic field consisting of 1958 sentences (37022 words and 3999 unique words) manually annotated as procedural and non-procedural by an expert annotator
  Web-site: https://gitlab.com/altairLab/spks-dataset/

- Visual-Textual-Knowledge Entity Linking (VTKEL)
  VTKEL, derived from Flickr30k-Entities dataset, consists of documents composed of a picture and five corresponding descriptions captioning it. Visual and textual mentions of each picture and captions are annotated and aligned to entities typed with classes from YAGO
  Web-site: https://doi.org/10.6084/m9.figshare.7882781.v6

- Annotated dataset to assess the accuracy of the textual description of cultural heritage records
  The dataset contains more than 100K textual descriptions of cultural items from Cultura Italia, the Italian National Cultural aggregator. Each of the description is labeled either HIGH or LOW quality, according its adherence to the standard cataloguing guidelines provided by Istituto Centrale per il Catalogo e la Documentazione (ICCD)
